

Recycle Yourself

Save lives through organ, eye,
and tissue donation!

GORECYCLEYOURSELF.COM

This presentation contains sensitive content regarding the discussion of death, grief, illness, and the showing of medical images.

Be mindful and respectful of everyone's experiences, feelings, and attitudes regarding the topic of organ, eye, and tissue donation.

Please care for yourself and reach out for support if needed.

Registers donors & educates the public about donation. We work with...

Organ, eye, and tissue recovery professionals

Transplant Centers

DMV

Do you have a “D” or a ♥ on your license?

*After I die, I wish to donate
organs, eyes, and/or tissues
to **save** someone's life,
restore someone's vision,
and/or restore someone's
mobility.*

Why **Don't** People Register?

Fears, Myths, and Misinformation

- TV and movies
- Concern over medical care
- Religious beliefs about donation
- Don't think they are eligible
- Don't want to think about death
- Don't know how to sign up

The Need for Organ Donors

Every **8 minutes**, someone is added to the waiting list.

On average, **13 people** die each day while waiting for a transplant.

86% of everyone waiting needs a kidney

People in the US are increasingly at risk for preventable conditions which eventually lead to kidney failure:

- Type II Diabetes*
- High Blood Pressure*

Due to systemic racism and health inequities, Hispanic, African, Asian, and Native Americans are up to 3x more likely to suffer from these conditions.

** Can be prevented or delayed by staying at a healthy weight, eating well, and getting exercise.*

What is it like waiting?

1. Doctors refer sick patient to a transplant center.
2. A committee of doctors, surgeons, and hospital staff decide whether a patient is a candidate for transplant.
3. A transplant candidate is added to the national waiting list.
4. People stay on the national waiting list for days, months, or even years.

The Waiting List

Alysia's Story

Local Heroes

Over 3 million Oregonians are registered donors

≈ 42,000 Oregonians died in 2024

1,608 cornea donors = 1,569 corneal transplants

706 tissue donors ≈ 165,579 tissue transplants

194 organ donors = 836 organ transplants

The background of the slide features a detailed anatomical illustration of a human kidney, colored in shades of blue and green, positioned centrally. Surrounding the kidney are various floral elements, including large pink peonies and smaller yellow and pink blossoms, all rendered in a soft, painterly style. The entire composition is set against a white background and framed by a light pink border.

True or False:

Organ donation is very common.

False. Not everyone who dies can donate organs, because they must die under very specific circumstances.

Criteria for Organ Donation

- Donor died in a hospital.
- Donor placed on mechanical ventilator prior to death.
 - Blood and oxygen continue to flow through the vital organs.
- Donor had a severe, irreversible brain injury, and one of two pathways occurs:
 - Donation after Brain Death (most common)
 - Donation after Circulatory Death (family approval required)

Criteria for Tissue Donation

- Donor died at home, in a care facility, or in a hospital.
- Donor does not need to be placed on a mechanical ventilator prior to death.
- Donor died due to a variety of causes.

Next Steps

If someone **CAN** be a donor...

- A separate team comes in
- The registry is checked
- The family is approached
 - If under 18, the family will be asked to authorize donation
- TALK TO YOUR FAMILY TODAY!

Organ & Tissue Recovery

The recovery surgery takes place in an operating room, in the same sterile and careful way as in any surgery.

- There are no costs to the family for the donation process.
- Being an organ or tissue donor does not interfere with funeral arrangements.

Which Organs Can be Donated?

One organ donor

can save up to 8 lives

What is a Cornea?

[John's Story](#)

True or False:

Donated corneas can restore sight to the blind.

True. When the cornea is damaged due to injury, disease, infection or a hereditary condition, corneal transplant surgery may be an option.

Which tissues can be donated?

[Jan's Story](#)

One tissue and eye donor

can save or enhance over 125 lives

True or False:

Grandparents
can be donors

True. No one should rule themselves out due to age, health, medical conditions, gender, or sexual orientation! Additionally, the criteria required for *organ* donation do not apply to tissue and eye donation.

Life After Transplant

- Managing rejection
- Healthy lifestyle
- More LIFE

Sarah Hyland

Megan Rapinoe

Tracy Hoyle

Selena Gomez

Laurie Hernandez

Mandy Patinkin

George Lopez

Steve Jobs

Donor Families

The gift of more life is invaluable to those who receive a donated organ or tissue, and donor families, like [Hayden's](#), are also impacted by the gift their loved one has given to others.

What can you donate while living?

- A kidney

You can donate a kidney to save the life of anyone who matches your blood and tissue type – recipients don't have to be a blood relative!

- Paired and chain donation
- How safe is it for the donor?

- A portion of your liver

- Very small portion of lung called a lobe

- Blood and bone marrow

Living donation has nothing to do with *registering as a deceased donor*.

In the US, you must be at least 18 to consider living kidney donation.

Pop Quiz

- 1) How many people's lives can be saved or enhanced by tissue and/or cornea donation?
- 2) Do you know if your family members are registered donors?
- 3) What is one new thing you learned today?

What Can You Do Today?

- Eat right and exercise!
 - Especially if your background puts you at high risk for Type II Diabetes or High Blood Pressure!
- Register!
 - Online
 - Paper form
 - Say "YES" to donation at DMV
 - On iPhone Medical ID (at age 18)
- Talk to your family!
- Host a donor drive!
- Start a SODA Chapter

Visit www.sodanational.org.

☒ **YES** I'D LIKE ORGANS TO BE
THERE IF I NEED THEM.

IF NOBODY GIVES, **NOBODY GETS.**
